硅铁球

硅铁球是用硅铁粉通过机器压制而成的，和硅铁的作用一样，是炼钢过程中不可缺少的脱氧剂和合金剂，可以很好的提高炉温，增加铁水的流动性，有效排渣，提高生铁和铸件的韧性及切削能力。同时，该产品粒度均匀，使用中节省燃料，溶化速度快，价格低，效果好，是冶炼生铁与普通铸造中硅铁的最佳替代产品。

Ferrosilicon briquette

Ferrosilicon briquette is pressed with ferrosilicon powder.

It is a necessary deoxidizer and alloying agent, can raise the temperature of furnace, increase the liquidity of molten iron, discharge effectively, and improve the toughness and cutting ability of cast iron and casting. At the same time, it is the best substitute of ferrosilicon in iron smelting and casting because of its equal granularity, saving fuel, speedily melting, low price, good effect.
